Market update:

A huge rally in the second half of the day on Friday saved the markets in general from what would have been an extremely bearish close. With that said the markets were down for the week last week with the Nasdaq down 1.10%, the S&P 500 down 0.51%, and the Dow down 0.98%. The annual PCE inflation report showed on Friday an increase of 2.7% YOY, which was in line with expectations. This week we have the unemployment numbers for May being released, which is expected to come in at 3.9%. If GDP continues to fall like it did in Q! (compared to Q4 23) and unemployment begins to increase it will be a sign of a struggling consumer. This leads to the catch 22 of the current situation because the Fed is more likely to give the markets what they want in the form of rate cuts if unemployment goes up but if unemployment increases materially and GDP continues slowing then what does that mean for corporate earnings.
